

Patient Mr. Rajeev Khanna	Age / Sex 58Y / M	UHID 1042	Period Apr 2025 - Apr 2026	Visits 10 visits
Primary Dx Adenocarcinoma - Right Lung	Current Stage IV	Protocol III	Last Visit 25 Apr 2026	

Trajectory & Symptom Map

- scan rows for trends across the 10 visits

Cross-Visit Red Flags

- patterns that only emerge when comparing visits

- Disease progression at V6 - new bone metastasis; restaged III to IV.
- Pleural effusion first noted V8; persists into V9.
- Protocol III declined V1-V5 despite physician advice (4 of 5 visits).
- New persistent symptoms post-progression: expectoration (V7+), fatigue (V6+).
- Three treating physicians across 10 visits - handoffs at V5 and V8.

Mr. Rajeev Khanna · 58Y / M · UHID 1042 · Adenocarcinoma - Right Lung · Stage IV · Protocol III · 10 visits · Apr 2025 - Apr 2026

Recent Changes (last 4 visits) - what's new, what's resolved, what to watch

- New

Pleural effusion (V8) - persists V9.
- New

Expectoration emerging (V7+), persistent.
- New

Fatigue post-progression (V6+).
- Resolved

Vomiting cleared after V3.
- Resolved

Fever single recurrence at V6, otherwise nil.
- Watch

Pain trending up V6-V7 (7/10), now 4/10 V9-V10.

Protocol Adherence

Did the patient follow physician guidance?

Visits	Advised	Opted	Status
V1 - V5	III	II	decline
V6 - V10	III	III	ok

Care Continuity

Treating physicians across the 10 visits

V1 - V4	Dr. Alisa Hassan	Surgical Onco
V5 - V7	Dr. Rohan Mehta	Medical Onco
V8 - V10	Dr. Priya Nair	Medical Onco

Metastasis Timeline

Clinical Impression AI-assisted summary across all 10 visits - pending physician review and signature

- Stage IV adenocarcinoma, right lung. Progressed at V6 (Nov 2025) with new bone metastasis; restaged from III.
- Symptom burden trended down through V5, rebounded sharply at V6, has been stabilizing since V8 on Protocol III.
- Patient adopted Protocol III only post-progression - 4 of first 5 visits declined the advised regimen. Adherence counseling indicated.
- Active findings to monitor: pleural effusion (V8 onward), persistent expectoration, progressive clubbing - consider imaging review.
- Recommendation: re-imaging and formal restaging at next visit; continue Protocol III; sustained physician continuity going forward.

Recommended Actions for Next Visit

- Order CT-thorax + bone-scan before next visit (imaging interval 8 wks).
- Continue Protocol III; reassess at V11.
- Adherence conversation with patient + caregiver.
- Pulmonology consult re: persistent pleural effusion.
